EXECUTIVE SUMMARY

A search of available records was conducted by Environmental Data Resources, Inc. (EDR). The EDR Offsite Receptor Report provides information which may be used to comply with the Clean Air Act Risk Management Program 112-R. *"The rule requires that you estimate in the RMP residential populations within the circle defined by the endpoint for your worst-case and alternative release scenarios (i.e., the center of the circle is the point of release and the radius is the distance to the endpoint). In addition, you must report in the RMP whether certain types of public receptors and environmental receptors are within the circles."*

The address of the subject property, for which the search was intended, is:

VERNON POWER PLANT
BOYLE AVENUE/FRUITLAND AVENUE
VERNON, CA 90058

Distance Searched: 6.000 miles from subject property

RECEPTOR SUMMARY

An X indicates the presence of the receptor within the search radius.

This map displays a grid of call letters and numbers across the Los Angeles area. The map includes major roads, rivers, and a central green star. Concentric circles are drawn around the center, and various call letters and numbers are scattered across the map, often near specific locations.

-
- A horizontal number line representing distance in miles. The line is marked with 0, 1 1/2, 3, and 6 Miles. A yellow segment is highlighted from 0 to 1/2 mile, and a black segment is highlighted from 1/2 mile to 3 miles.

Census

Source: U.S. Census Bureau

Telephone: 301-457-4100

2000 U.S. Census data was used to estimate residential population following these EPA guidelines:

"Census data are presented by Census tract. If your circle covers only a portion of the tract, you should develop an estimate for that portion...Determine the population density per square mile (total population of the Census tract divided by the number of square miles in the tract) and apply that density figure to the number of square miles within your circle."
